Career Advancement

Your ideas should have an impact on the world.
At UChicago, we work to make that happen. You will interact with some of the sharpest minds around, get hands-on experience from the moment you set foot on campus, and, with over 150,000 alumni and many more friends of the University worldwide, you will gain on-the-ground experience in your field of interest.

Metcalf Internships
Over 2,000 substantive, paid internships—exclusive to UChicago students—are hosted each year through the flagship Jeff Metcalf Internship Program. This program matches undergraduates with top employers in more than 85 cities around the world and offers substantial financial support. Career Advancement manages the hiring process to ensure that the experience is both productive and rewarding. From mayors’ offices to movie studios, federal agencies to major law firms, investment banks to museums, a Metcalf internship is your opportunity to couple your UChicago education with hands-on experience.

Externships
UChicago matches you with hosts in a variety of fields for one- to five-day externship experiences—a fantastic way to build your professional network, gain firsthand experience, and explore potential career paths.

Treks
Treks give you a practical understanding of daily life in your field of interest by taking groups of students around the world to meet with potential employers. Each trek highlights professional opportunities in a particular career field and city—from venture capital in Silicon Valley to publishing in London. Treks help you feel confident in networking situations, identify concrete ways to secure a career in your field of interest, and determine whether a particular career field matches your passions, skills, and values.

Grants
Students interested in experiences beyond the traditional workplace can receive grants that support undergraduate research projects and internship opportunities that would otherwise be unpaid. Certain grants fund discipline-specific research or experiential learning related to your major, while others support summer employment. The Pat Rosenzweig Fellows Internship Fund, for instance, provides grants to support undergraduate students who have secured unpaid summer internships with non-profit and policy organizations.

Networking
UChicago produces incredible alumni—innovators, leaders, acclaimed creative professionals, ground-breaking researchers, and students. Connect with and learn from them first through fourth years at both large-scale and intimate events that bring together employers, alumni, advisers, and students.

College New Venture Challenge
The College New Venture Challenge solicits student ideas for nonprofit and for-profit startups that incorporate technology and have a positive impact, awarding up to $30,000 in prize money. Other on-campus, business-oriented challenges and competitions include the Midwest Trading Competition, in which students compete in teams in simulated trading, and the Venture Capital Investment Competition, in which student teams form mock firms to evaluate early-stage business opportunities.

The Institute for Molecular Engineering
The Institute for Molecular Engineering (IME) is an interdisciplinary program dedicated to translating advances in basic physics, chemistry, biology, and computation into new tools to address societal problems through molecular science. The IME allows students to get involved at the cutting edge of chemical and molecular research. Students can work with industry-leading faculty to conduct research with the IME as early as their first year.

The Pat Rosenzweig Fellows Internship Fund
Provide grants to support undergraduate students who have secured unpaid summer internships with non-profit and policy organizations.
